

MOHAMMAD TAQUI

AI Engineer

☎ +91 - 6306597320 | ✉ alamtaqui@gmail.com | 📍 India | [in LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Computer Science student with strong programming fundamentals, leadership abilities, and a problem-solving mindset. Skilled in writing clean, efficient code and applying creative and critical thinking to real-world projects. Seeking opportunities to learn, contribute, and add value to organizational goals while accelerating personal growth.

SKILLS

Programming Languages: Java, C, Python, Go

Frameworks: Java Spring Boot, FastAPI, LangChain, LangGraph, Spring MVC

Frontend Technologies: HTML, CSS, React

Databases: SQL, ChromaDB (Vector Database), PostgreSQL

Tools / IDEs: Visual Studio, Eclipse IDE, GitHub, Ollama, IntelliJ IDEA

Concepts: Data Structures & Algorithms, OOPS, System Design, Database Modeling, REST APIs, Database scaling, Authentication

AI/ML: Generative AI, RAG, Prompt Engineering, Agentic AI, observability, vector embedding, Design Patterns

EXPERIENCE

BerryBloomer Pvt Ltd

Jan 2026 - May 2026

Java / Full Stack Developer (Intern / Trainee / Developer)

- Worked on MyPet, a full-stack pet marketplace mobile application using Spring Boot and React Native (Expo).
- Developed and secured RESTful APIs with JWT-based authentication, OTP verification, and Spring Security.
- Implemented core modules including pet listings, user management, subscriptions, payments, and media upload.
- Integrated Razorpay payment gateway and followed layered architecture (Controller–Service–Repository) for scalable backend design

EDUCATION

Sir Chhotu Ram Institute of Engineering & Technology, Meerut

2023 - Present

B.Tech in Computer Science and Engineering

8.05

St.Al.Haneef Educational Centre, Chandauli

2023

Intermediate (12th)

PROJECTS

Aureza | Full-Stack E-Commerce Platform

Aug 2026 - Present

- Engineered the complete backend using **Java 21, Spring MVC and PostgreSQL**, following layered **Controller–Service–Repository** architecture, DTO-based APIs, and centralized exception handling.
- Designed a scalable **React 19** frontend using **Atomic Design** principles with reusable components and structured integration with REST APIs.
- Implemented secure multi-role commerce workflows with **Spring Security, JWT, BCrypt, JPA/Hibernate**, including Admin, Seller, and Buyer authorization, dynamic product filtering, pagination, and transactional order processing.
- Integrated **AI capabilities into the platform**, where appropriate while maintaining human-designed backend architecture, business logic, security, and API implementation.

- Built an **Agentic AI Research Agent** using **LangGraph and LLMs** to autonomously research user-provided topics and generate structured, research-oriented reports.
- Designed a **multi-step agentic workflow** for query analysis, web research, information extraction, synthesis, and final report generation.
- Applied **modular architecture and clean separation of concerns**, making individual agents, tools, and workflow components easy to extend or replace.
- Optimized the research pipeline to produce **compact, context-rich, and reliable outputs** from information collected across multiple sources.

ACHIEVEMENTS & CERTIFICATIONS

- Achieved a 5-Star HackerRank rating in Java and successfully solved 700+ problems on CodeChef with a 1400 rating.
- Nominated at college level for the Smart India Hackathon (SIH) by presenting an innovative and practical solution.
- Actively contributed to management, event operations, and communication, serving as a core member of SIO NGO.

PUBLICATIONS

Your First Agentic AI: From Concepts to Production, Medium Aug 2026
Agentic AI: From Concepts to Production — Authored a technical guide explaining the core architecture and design principles of Agentic AI systems, including state and shared memory, reducers, workflow design patterns, persistence, threading, streaming, RAG, Human-in-the-Loop (HITL), and observability, along with a high-level Docker, AWS, and CI/CD production pipeline.
